

QUICK START.

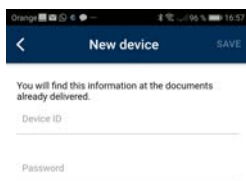

You must do the following:

- When you receive the device, charge it. Wait 3 hours for the charge to be complete. You can charge it with an Android smartphone charger.

- When you connect the charger you will see flashing red lights
- Install CENTINELA PRO on your smartphone. [See video.](#)

First time registration

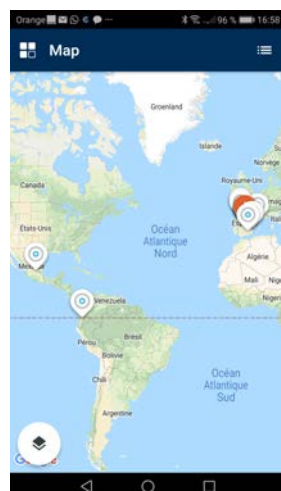

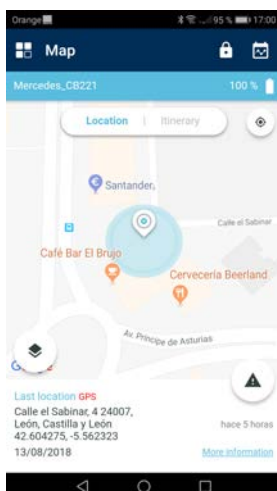

First time you must register as user. You must do it at your Smartphone. Click on “register” and complete the data of the first screen. Then, you must associate your devices.

*The app will ask the device ID and the password. This data can be found on the card provided with each frame. **You must keep this card always.** Associate all devices you may have*

How the application works

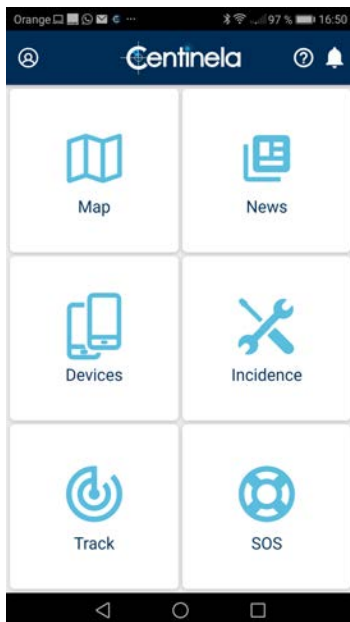

When accessing the app through your passwords, you will find the map where you can see the location of all frames that were associated.

If you click on the map location tick, you will see all information on the lower side of the screen. Even you can get more information by clicking on “More information”. If you wish to see the daily itinerary, you must click on “itinerary” on the upper side. If you wish to see previous itineraries, you must click on the right upper side icon. [See video.](#)

Drop Down Menu

When clicking on the icon placed on the left upper side you can see the following menu:

Map. Click it to see a map with the location of all your devices

Warnings. You can see a list of all warnings (movements, low battery, safety area...)

Devices. This option shows a list of all associated devices. You can change the configuration of any device, name, sensitivity, transhumance mode, updating of time zone, setting of geo-searching. We recommend start by setting the time zone. You also can delete associated devices

News. Here you can see news and messages of our Company

Tracking. Not available for these devices

Configuration. You can change name, emergency telephone, password and language

SOS. You can phone from the own application to the emergency number that you set through this configuration

Log out. You can close the application. To start again, you must set the user and password again. If you wish your smartphone to keep them, close the application without clicking here

Please, click here for more videos. [https://](https://www.seguridadcentinela.com/en/videos/)

www.seguridadcentinela.com/en/videos/

Web access.

To Access the information of your device through web, you must use the following address

www.seguridadcentinela.com/acceso/

You also can do it through our website www.seguridadcentinela.com by clicking on Access. Remember that to access through the web, you must have been previously registered through your smartphone.

You will see on the screen all devices you have associated to your account. On the left you will see the icon "See", by clicking it you will see the following screen

See last location. By pressing this button, you can find the last known location. Coordinates, date and time.

See last 24 hours. By clicking on this button, you can see the last 24 hours.

See specific day. Choosing the specific date, you can see the itinerary of any day. (even the current one)

Activate / deactivate geo-fence. If you choose this option, you will receive / block notifications when the device is outside the safe zone.

Configure geo-fence. When clicking this option, you will see a map with a circular geo-fence. You can move this area by clicking on the center of the circle and dragging it to the area that you consider safe. To modify the size of this safe area, you can press any of the four points outside of the circle and drag it with the mouse until you have the desired size. We do not recommend areas of less than 100 meter radius. If it not, there may be false alarms.

For these communications to be effective, you must program the notifications on your smartphone.
