

Device for vehicles

User Manual

Background.

This device has been conceived to protect assets (cars, motorcycles, machines, etc.). It has been conceived to track continuously the protected asset. It will warn you immediately when the car starts.

The device has a battery that allows to keep working even after the battery is removed from the vehicle or disconnected. Our recommendation is to connect the device directly to the car battery. In any case, remember that it can also be used in portable mode. In this case, you should recharge the battery, taking into account the following:

- Do not use places where the CENTINELA device is completely surrounded by metal.
- Make sure that the device is oriented in such a way that the sticker with our logo is not oriented towards the floor.

If you click on this link, we will show you the entire process necessary to start up your CENTINELA device. [Video installation App.](#)

Very important.

In order the service to work properly, remember to subscribe so we activate the phone line. Once the subscription is made, you will immediately begin receiving the geolocation information of your device. You can subscribe by accessing the following link. <https://www.seguridadcentinela.com/tienda/suscribete>. If you have purchased it through the web shop, you have already made the subscription and it is not necessary to do it again.

This device is designed to locate your vehicle and uses GPS system and other location systems. You should know that the GPS system only works when the device is on the street. Unfortunately, GPS devices do not work inside buildings, or they give wrong positioning. In urban or densely built-up areas, GPS location is much less accurate than in open areas. Climatic conditions also affect the speed and accuracy of the location.

The first location of each route can take several minutes. Do not worry, it's normal. Once you have made the first location, the rest will be faster.

When the device enters an area without telephone coverage, it obviously cannot transmit the positions of your device. However, the device stores them in its internal memory and as

soon as it enters a covered area again, it will indicate it again and mark all the previous positions on the map. Remember that the device has a multi-operator SIM card installed that connects to several telephone companies in each country. This guarantees the maximum possible coverage.

The device sends notifications in several circumstances. Low battery, leaving the geo-fence, start of device loading (*), charge completed (*). To receive such notifications, you must activate them on your smartphone. The way and sound of receiving such notifications does not depend on our application. It only depends on the configuration of your smartphone. Be sure to do it correctly. [See this video.](#)

Remember that we are at your disposal. If after reading these instructions you have difficulties to start the device, we invite you to see the most frequently asked questions. There are abundant videos explaining all the necessary steps. www.seguridadcentinela.com/manuales/

If you still need help, tell us your problem and send it to us through the mobile application by clicking on "Incidents" or you can also send us an email to support@seguridadcentinela.com and we will get back to you as soon as possible.

To clean the stem, avoid high pressure jets. It can damage the paint and may cause damage to the device.

Do not manipulate the stem nor the internal device. Do not remove it from inside the stem. If you do so, you will automatically lose the Device Warranty.

NOTE: Some countries may have restrictive legislation on GPS tracking of people, animals or things. The user is solely responsible for complying with local laws relating to this subject.

Content of the box

Every sending includes the following material:

- GPS device with battery. The device has a micro-USB connector and cables for c.c. connection
- Instructions Manual
- ID Card of the device.

Battery

If the device is to be installed connected to the vehicle's battery, you should not worry. If not, in case you are going to be in portable mode, the first time you load it, do it for at least 4 hours.

The device is powered by a rechargeable lithium-polymer battery. We give you some tips for proper operation of it.

- Do not remove or replace the original battery
- Do not expose the device to heat sources. It can cause irreparable damages to the battery and the electronic circuit. Temperatures below 0° and above 45° C may damage the device.
- If you are not going to use the device for several months, we recommend that you do a full charge of the battery when it is stored and repeat the full charge every 6 months. Lithium-polymer batteries, when fully discharged for a long time, break down and lose their capacity to store electrical energy, thus rendering them totally inoperative.

First time registration

Download and install on your Smartphone the app CENTINELA PRO. Available in App Store and Google Play.

First time, you must register as user. You must do it on a smartphone. Click on "Register" and fill the data. Later you must associate your devices to your profile. See this video for a better understanding. [App installation Video](#)

A screenshot of the "New device" registration screen. The title bar is dark blue with a back arrow, "New device", and a "SAVE" button. The main content area has a light blue header "You will find this information at the documents already delivered." followed by two input fields: "Device ID" and "Password". The bottom navigation bar is black with three white icons: a back arrow, a circle, and a square.A screenshot of the "Register 2/2" screen. The title bar is dark blue with a back arrow, "Register 2/2", and a "SAVE" button. The main content area has a light blue header "INFORMATION ABOUT DEVICES". Below it, text says "To use Centinela you must associate at least one device. Do you want to add one now?" followed by a blue button with a white plus icon and the text "+ Add device". Below that, text says "You can later add devices from the section Devices of application menu." followed by a blue button with the text "Finish". At the bottom, text says "When registering, you accept our [Conditions](#) and ours [Privacy policy](#)." The bottom navigation bar is black with three white icons: a back arrow, a circle, and a square.A screenshot of the "Register 1/2" screen. The title bar is dark blue with a back arrow, "Register 1/2", and a "SAVE" button. The main content area has a light blue header "ACCESS INFORMATION". Below it, there are two input fields: "Correo electrónico" and "Password". Below the "Password" field, text says "The field must contain at least 8 characters". Below that, there is a light blue header "PERSONAL INFORMATION". Below it, there are two input fields: "Name" and "Emergency telephone". Below the "Emergency telephone" field, text says "Let us know a telephone number to contact you in case of missing or robbery." At the bottom, there is a blue button with the text "Next". The bottom navigation bar is black with three white icons: a back arrow, a circle, and a square.

The application will ask for the "Device Id" and the "Device Password". You will find this information on the device card. **You must keep the card indefinitely.** Associate all the devices that you have purchased.

Application operation

When accessing the application with your passwords, you will access the map that shows the location of the devices that are associated.

By clicking on map location you will see all detailed information on the lower side. Even you can get more information by clicking on "More information". If you wish to see the daily itinerary of the device, click on "Itinerary" on the upper side

In order to see the previous itineraries, click on the icon situated on the right side

Drop-down menu

When you click on the icon located in the upper left, the following Menu appears

Map. You will see a map with the location of all devices. [See this video](#)

Alerts. You will see a list of all alerts provided by all devices (low battery, detected movement (only in alert mode))

Devices. This option shows a list of all associated devices. You can activate and deactivate the alarm in case of robbery. You can also change the configuration of all devices, name, sensitivity or eliminate an associated device. [See this](#)

[video](#)

News. Here you can see last news of our company

Track. This option is only operative in case of theft. First you must confirm the theft by pressing "Activate Alarm" on the stolen device. You will find it in the "Devices" menu. Once the device is on alarm, you can access the "Tracking" option. This option will allow you to find and approach the stolen object and prove reliably the presence inside a building, from the common areas or from the street. [Watch this video](#)

When the alarm is activated, the CENTINELA device emits a short-range signal and transmits to the App the WIFI networks that is detecting

When accessing you will see a screen very similar to the following one.

The screen is divided into two parts. The lower part will show the WIFI networks detected by the CENTINELA device at its current location. As you get closer to the area indicated on the Map, some WIFI detected by the device will also be detected by your phone. At that time, it will be indicated that there are COINCIDING WIFIS. This way, it confirms the proximity to the stolen object.

The upper part of the screen shows the intensity with which the signal emitted by the CENTINELA device reaches the mobile. You must move around the area and detect the

point of greatest signal received. The signal crosses walls and slabs and indicates the origin of such signal.

Configuration. From this option you can change your name, emergency telephone number, password and the language of the application.

SOS. By pressing this option, you can make a call from the application to the emergency telephone number that you have in the configuration.

Log out. With this option, you will close the application completely and to re-enter you must enter the user and password again. If you want your phone to remember the user and password, close the application without using this option

Web access

To access your device's information via the web, you must use the following address.

www.seguridadcentinela.com/acceso/

You can also access through www.seguridadcentinela.com by clicking on Access. Remember that to access through the web, you must first have registered with your mobile phone.

List of devices.

When accessing you will see a list with all the devices associated to your account. In this list you can see the Map, the name of each device, the status of the device and the battery level.

By clicking on "See", you will Access the following Menu.

Arm/disarm device. You can allow or block the warnings of the device. Rest of services remain the same.

Configure alarm. In case of robbery, you must confirm the alarm by clicking this icon. It activates all available mechanisms to locate the good

See last point. By clicking here, you will have a map with the last location of the device

See the current day data. A map with the whole itinerary carried out the present day will be shown

See a specific day. Choosing a specific date, you can see the itinerary on such date (even the current date).

Also in the lower part of the screen you can see a brief summary of the most important data of the itinerary and there is a "daily detail" icon that is a complete report of all the activities of such day. Coordinates, speed, number of satellites, location accuracy, level of coverage, level of battery charge, type of location used, date and time of each of the locations are shown.

If after reading this Manual you have any questions you can contact us.

You can also see the online Manuals online in the App. You will find it on the Menu by clicking on the "instructions" icon. Here you can read the complete Manual and you will have the answer to the "frequently asked questions".

Thanks for trusting on us
